RE:	Insured:	VANCE THOMPSON VISION CLINIC
	Claim Number:	FME2589
	LSG Matter Number:	787200.12542-00
	Date of Loss:	June 27, 2025

Dear Mr. Evans,

Thank you for choosing Loss Solutions Group as your equipment loss consultant. This report serves to provide an analysis of the above-referenced claim.

Assignment:

Loss Solutions Group was contacted by Mr. Matthew Evans of Travelers Insurance. The scope of this assignment was to address the extent of damage, repair/replacement costs, and salvage value associated with the insured's Generac generator and the attached four hundred (400) Amp Automatic Transfer Switch (ATS). The loss occurred due to a fire incident on June 27, 2025.

Findings and Analysis:

Loss Solutions Group contacted the insured, Mr. Brian Frick with Vance Thompson Vision Clinic (605-371-7139), to discuss our role in reviewing the claim. Mr. Frick explained how their standby Generac generator, which serves their ophthalmic clinic and surgery center, experienced a small fire during a scheduled run test when the transfer switch contactor ignited. Repairs were completed in two (2) visits, restoring the generator to proper working order.

Loss Solutions Group contacted the insured's electrical vendor, TW Enterprises (406-845-4600), and spoke with Mr. Richard Martin, a coordinator at the company. Mr. Martin detailed the parts listed in the repair invoice and the damages necessitating them, explaining how the ATS transfer relay was stuck in the closed or energized position, causing failure. This is a common failure mode for higher-amp contactors/switches. For a four hundred (400)-amp generator and ATS, repeated electrical arcing at the contactor ports causes pitting and carbon (soot) buildup, increasing electrical

resistance, generating excessive heat, and eventually melting and welding the contacts together, resulting in failure in the closed, energized position.

Scope of Damage

Loss Solutions Group submits that the insured's Generac air-cooled Guardian Series automatic standby generator system and the related four hundred (400) Amp ATS sustained damage from a reported fire incident on June 27, 2025.

Age & Condition

The insured stated the generator was installed in 2019, making the generator and ATS approximately six (6) years old and in average condition at the time of the incident.

Reparability

After reviewing the provided documentation and discussing the damage with the vendor, Loss Solutions Group concludes that the already completed repairs were appropriate and necessary to address the incident-related damage.

Cost Analysis

Loss Solutions Group assessed the proposed costs by cross-referencing with alternative vendors, drawing on historical data for similar repairs, evaluating comparable equipment pricing, and consulting directly with the involved vendor to verify reasonableness. Below is a breakdown of the associated costs.

TW ENTERPRISES (406-245-4600) INVOICE # CD99011766

Loss Solutions Group reviewed the invoice totaling $6,893.04 for parts and labor to repair the Generac generator and attached ATS.

The quote includes a replacement relay switch, a four hundred (400) Amp three (3) pole ATS, and lastly a printed computer board (PCB) for the generator. These components were necessary for the repair, and the pricing is fair and reasonable. The labor costs cover diagnostics and repairs. These amounts are fair and reasonable for the scope of work.

RCV

Loss Solutions Group conducted an independent cost analysis and recommends $6,893.04 as the fair and reasonable RCV to restore the insured to pre-loss condition. Supporting cost research is provided herein, and a detailed pricing breakdown is available in the attached spreadsheet.

Salvage

Loss Solutions Group determined that there is little to no salvage value associated with this incident.

Summary:

Loss Solutions Group's findings herein are based upon all information that was available at the time of this writing. The opinions are based upon reviewed documentation, interviews, research, experience, historical references, training and education.

1. The insured, Vance Thompson Vision Clinic, reported damage to their Generac air-cooled Guardian Series automatic standby generator system and the related four hundred (400) Amp ATS during a fire incident on June 27, 2025.

2. The insured stated the generator was installed in 2019, making the generator and ATS approximately six (6) years old and in average condition at the time of the incident.

3. After reviewing the provided documentation and discussing the damage with the vendor, Loss Solutions Group concludes that the already completed repairs were appropriate and necessary to address the incident-related damage.

4. Loss Solutions Group conducted an independent cost analysis and recommends $6,893.04 as the fair and reasonable RCV to restore the insured to pre-loss condition. Supporting cost research is provided herein, and a detailed pricing breakdown is available in the attached spreadsheet.

5. Loss Solutions Group determined that there is little to no salvage value associated with this incident.

If you have any questions or need additional information, please don't hesitate to contact Tanner Beuret at (866) 899-8756, ext. 755, or via email at tbeuret@losssolutionsgroup.com. Team Leader Nick Ramos can be reached at (866) 899-8756 ext. 724, or via email at nramos@losssolutionsgroup.com.

Best regards,

Notes:

GENERAC-SO-2105288

Notes: 07-15-25 120 miles, 2 hours labor
1st visit was replacing the contactor. Discovered that the PCB had also been damaged and needed replacement.
2nd visit was to R&R the PCB. Resolved the 24VDC loss and allowed reset, but unit now wouldn't energize either closing coil, but starts generator and opens sources correctly. The TR relay repeatedly energizes to close the coil(s), but L-L power does not appear at the A1-A2 and B1-B2 terminals. Found relay failed in the energized position, causing ATS to latch open. Installed new relay. Performed transfer test, ATS operating normal at this time.
